29. Which class of medications is most commonly used for the symptomatic management of Alzheimer's disease? 28. e. Rapidly progressive motor increase

27. Which diagnostic test is considered essential for ruling out reversible causes of dementia? e. Presenilin-3 (PSEN3)
26. Which of the following is a key feature that differentiates dementia with Lewy bodies (DLB) from Alzheimer's disease? a. Frontotemporal dementia
b. Vascular dementia
c. Alzheimer's disease
d. Lewy body dementia
e. None of the above
24. Which neurotransmitter is most significantly decreased in Alzheimer's disease? 25. Which of the following genetic mutations is most strongly associated with early-onset familial Alzheimer's disease? A 50-year-old man with a history of hypertension and migraines presents with severe unlisteral headach loss in one eye. He denies any aura or other neurological symptoms. His blood pressure is 180/110 mm; a. Start triptan therapy

b. Evaluate for hypertensive emergency and secondary causes of headache

c. Prescribe NSAIDs and follow up in 2 weeks

e. Prescribe NSAIDs and follow up in 7 weeks

a. Frontotemporal dementia

b. Vascular dementia

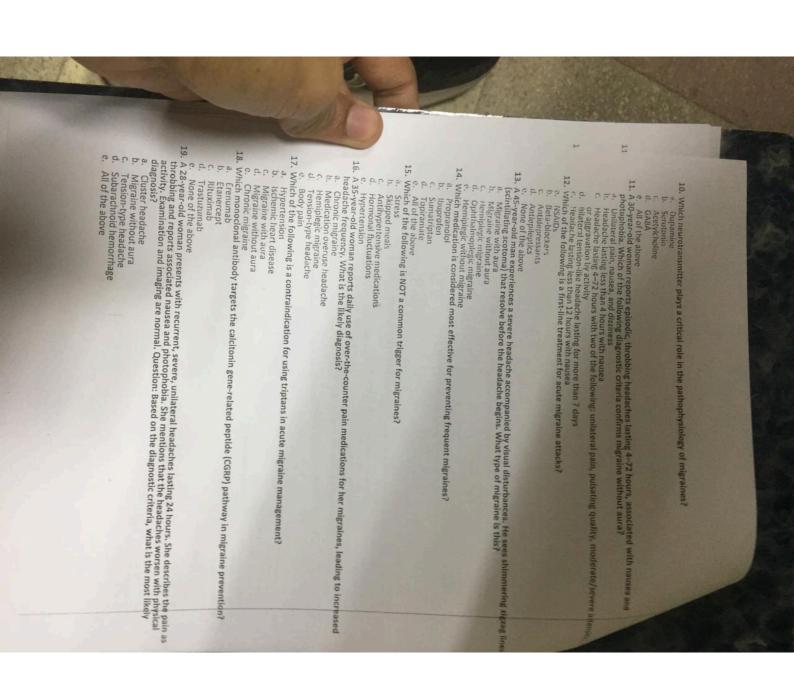

a. Frontotemporal dementia A 40-year-old man reports a history of migraines. He experiences headaches twice a week despite regular use of next best step in managing this patient?

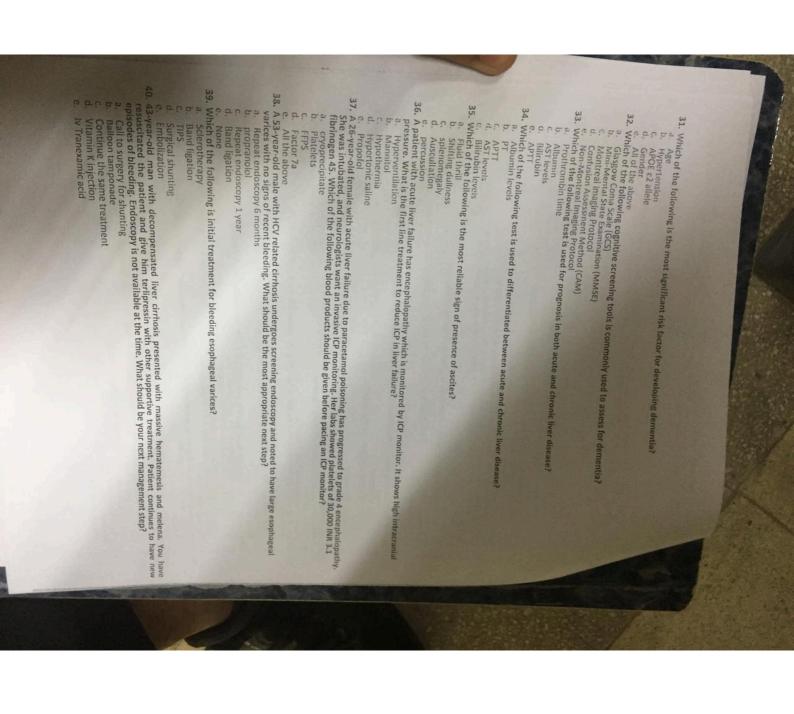

a. Increase triptan dosage Which of the following best describes the pathological hallmark of Alzheimer's disease?

a. Alpha-synuclein aggregates in the substantia nigra
b. Beta-amyloid plaques and neurofibrillary tangles A 32-year-old woman experiences recurrent headaches preceded by visual disturbances, inclusional forms. The headaches are unilateral, throbbing, and associated with womiting. She similar symptoms. Question: What is the most appropriate acute treatment for her headach. 5000 ن ت ن ن ن ن 9000 65000 All of the above ch of the following clinical features is most consistent with frontotemporal dementia (FTD)? Tauopathy confined to the frontal lobes

Vascular infarcts in cortical and subcortical regions

Beta-amyloid plaques NMDA receptor antagonists
Dopamine agonists
Acetylcholinesterase inhibitors None of the above Memory impairment as an early symptom Rapidly progressive motor decline Visual hallucinations and fluctuating cognition CSF tau protein levels Serum vitamin B12 and folate levels Disprin Brain MRI All of the above Severe aphasia Presenilin-1 (PSEN1) Microtubule-associated protein tau (MAPT) TDP-43 None of the above Acetylcholine disturbance and falls inent language disturbances or behavioral changes pamine oxidase inhibitors

a. Alport syntax.

b. Membranoproliferative groups.
c. Membranous glomerulonephritis
d. Rapidly progressive glomerulonephritis
e. Renal papillary necrosis
e. Renal papillary necrosis
pallor. His labs are as follow, Hb 7gm/dl, TLC 7000, serum ferritin is normal, what is the moderating? 48. All of the following increase the likelihood of abdominal pains, except 49. 47. How many types of dialysis are there? 45. A 12-year-old boy presents with 2 weeks history of pain in knee joints associated with fever, soliday soliday abdomen and rash over buttock area. Urinalysis showed proteinuria and hematuria. The most likely solvens a. Post streptococcal glomerulonephritis

b. Hemoch-schonlein purpura d. Hydrate the patient
e. Give branch chain amino acids
42. A 10-year-old boy presents with severe proteinuria, hypoalbumine normal creatinine. The patient improves on trial of continuation the following is most likely the diagnosis? 46. A 28-year-old girl presented with left loin pain and hematuria. Her mother was hypertensive and dead of stroke as the age of 54. On examination she had palpable kidneys, blood pressure was 170 /100. Serum creations was 1.3 may feet as the serum of the serum creations and the serum of th Diabetic nephropathy

C. Lupus nephropathy

C. Lupus nephropathy

d. Membranous glomerulosclerosis

d. Membranous glomerulosclerosis

d. Membranous glomerulosclerosis

43. A 5-year-old boy is diagnosed with poststreptococcal glomerulonephritis and his glomerular filtration rate has decreased by 50%, since his admissis a Alport syndrome

Alport syndrome

Mignosis? e. sickle cell anemia Which of the following is the cause of Primary Headache a. Adult polycystic kidney disease 1-year-old man with decompensated cirrhosis presented with difficulty in sleeping at the providence and confusion for 3 days. His attendants tell you that he has diarrhes for the last 3 days at Give 20 pidem chemotherapy Give neomycin Give lactulose Iga nephropathy Urinary tuberculosis racture humerus Acute nephritis Sub-acute bacterial endocarditis tracranial hemorrhage opisoning eft ureteric stone Minimal change disease with peritonitis psychological responses to stress include aggression

59. Whio b. C 57. A patient presented in psychiatry OPD with complaints of intrusive thoughts persistently regarding the existing of the God. Whenever he is praying in mosque then obscene thoughts intrudes into his mind which is usually sexually oriented he is very fearful that he will lose his faith. This phenomenon is called as:

a. Obsessional runninations
b. Obsessional doubts
c. Obsessional impulses
d. Obsessional inpulses
d. Obsessional inpulses
e. Obsessional runlingits
e. Obsessional rulals
58. Which one of the following is the drug of choice for the treatment of OCD?

a. Impramine
d. Nortriptyline
d. Nortriptyline
d. Nortriptyline 56. Regarding the prevalence of OCD, what is the male to female ratio? 54. A 40 years old patient presented in OPD with forgetfulness, confusion, loss of coordination and tachyc substances for the last many years. The psychiatrist told the students that this may be a case of Werna b. Cannabis

- Cannabis

- Alcohol

- Heroin

- Heroin

- Heroin

- Cheroin SS. 53. Which one of the following substances has more tendencies to cause social harm? 52. Which one of the following substance has more tendencies to cause A Patient presented in OPD with complaints of severs craving for substance, rhinorrhea, lacrimation, body aches, loose, motions and abdominal cramps. On examination he is having anemia and tachycardia. He is has a long history of using substances. What is the most probable diagnosis? Warning signs in case of respiratory diseases, that require immediate attention are all, except Systematic desensitization ch one of the following behavioral therapy can be used for the treatment of the OCD? Cue exposure therapy se. After reaching his class he is very irritable and punishes students severely on minor issues. Which defense Cannabis withdrawal state Methamphetamine (Ice) cute cannabis intoxication ice (Methamphetamine) osure and response prevention CSTASY (MIDMA) m has been used in this scenario? ncy management

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          protein 1500mg/dl, glucose 35mg/dl, Mostly lymphocytes what will be the most likely diagnose.

A cute bacterial meningitis.

A cute bacterial meningitis

Malaria

Tuberculous meningitis

Valporic acid effect on newborn?

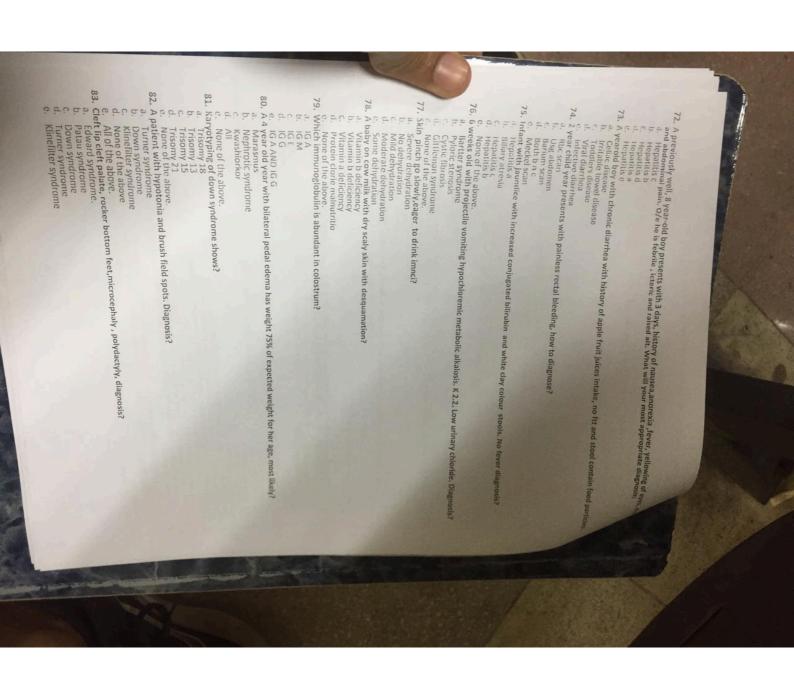

Ceft lip and palate.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       d. Stroke
e. Limb Agnesis
64. 9 Year old with low grade fever and GTC fits. She also had history of fits 4 months back, BSR, ELECTROLYTES, CSR
a. Epilepsy
b. Encephalitis
c. Meningttis
d. Febrile convulsion
e. None of the stroke and stroke an
                                                                                                                                                                                                                                                         69. Status epilepsy is defined as:
a. Fits more than 10 mins.
b. Fits more than 20 mins.
c. Fits more than 20 mins.
d. Fits more than 20 mins.
d. Fits more than 30 mins.
d. Fits more than 20 mins.
d. Fits more than 20 mins.
d. Fits more than 50 mins.
d. Diarrhea, which persists for more than 1 month with non-infectious etiology.
b. Diarrhea, which persists for more than 3 months with non-infectious etiology.
d. Diarrhea, which persists for more than two weeks with non-infectious etiology.
d. Diarrhea, which persists for more than two weeks with nifectious etiology.
d. Diarrhea, which persists for more than two weeks with nifectious etiology.
e. Diarrhea, which persists for more than two weeks with nifectious etiology.
e. Diarrhea, which persists for more than two weeks with nifectious etiology.
e. Diarrhea, which persists for more than two weeks with nifectious etiology.
h. A 2 year old child pesented with history of loose motion and abdominal pain. On examination, he is failure to thrive, e. Diarrhea, which persists for more than two weeks with nifectious etiology.

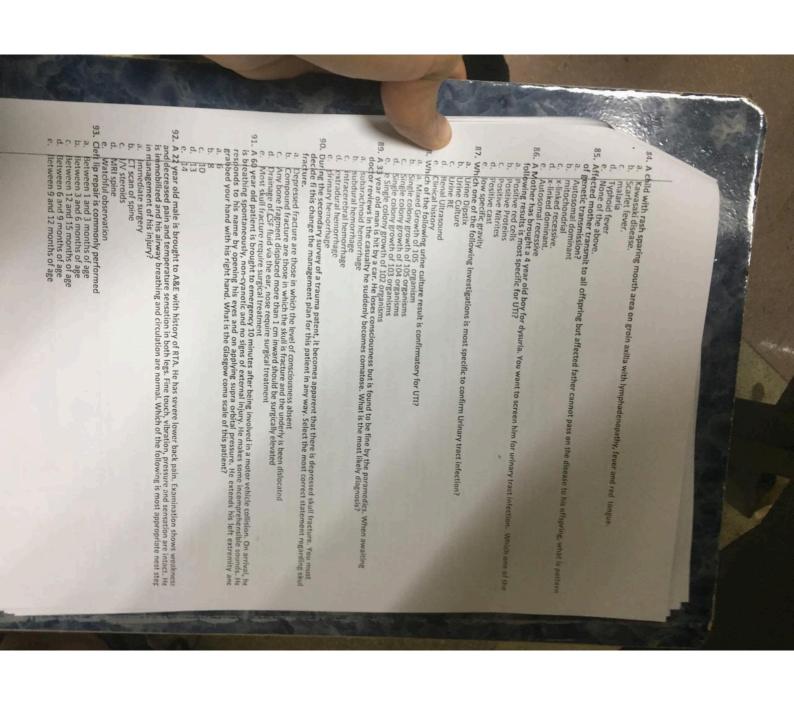

T. A 2 year old child pesented with history of loose motion and abdominal pain. On examination, he is failure to thrive, e. Diarrhea, which persists for more than two weeks with nifectious etiology.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         66. Treatment of choice for absence seizures are:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    68.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     67. Mother pregnant again, she has already one baby with neural tubr defect. She wants to know risk of NTD in the current
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    65.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             which one of the following is not a predisposing factor for the post-traumatic stress disorders.
                                                                                                                                                                      most appropriate diagnosis;
a Inflammatory bowel disease.

    d. Febrile convulsion
    e. None of the above.
    A girl with history of black out in class notified by teacher. Her EEG was done which was likely diagnosis?

103. A 79 year old man has had abdominal pain for 4 days. An operation is performed, and a gangrenous appendix is removed. The stump is inverted. Why does acute appendicitis in elderly patients and in children have a worse 102. A 33 year old woman is noted to have a Meckel's diverticulum when she undergoes an emergency appendectomy. The diverticulum is approximately 60 cm from the ileocecal valve and measures 2-3 cm in length. What is the most common complication of Meckel's diverticulum among adults? 101. A 42 year old woman is admitted to the emergency department with severe colicky pain, vomiting, and abdominal distintion. She has not passed stools or flatus for 48 hours. X-rays of the abdomen confirm the presence of small bowel obstruction. What is the most likely cause of small bowel obstruction in this patient? 100. Which of the following LEAST predisposes to the development of esophageal carcinoma? 99. In a patient with gastroesopageal reflux disease (GERD), which of the following patient is LEAST likely to require.

a. The patient with presents with security to require the patient of the following patient is LEAST likely to require. 97. A 79 year interest value may state that he do not retired singer presents with dysphagia, which has become progressively worse during swallowing. He sometimes aware of a lump on the left side of his neck and that he hears gurging a Carcinoma of the exophagus to the caphagus the compagus of the exophagus of 98. The standard initial therapy for acure sigmoid volvulus is:

1. Laparoxiomy to reduce the volvulus and replace the sigmoid colon to its normal position. The appendix is retrocecal the appendix is in the prelieal position. The appendix is in the prelieal position. The appendix is in the pelvic position. The appendix is in the pelvic position. The onentum and peritoneal cavity appear to be less efficient in localizing the disease in these age groups. * *nergency hernistromy * orchidopery

55. All of the following are true regarding management in acute appendicitis, EXCEPT:

*Advantabilities of the regarding management in acute appendicitis, EXCEPT:

*Approximent ultravorage palpy has a poor diagnostic accuracy

*The October's Sherron regime is the standard for conservative management

*Brown to above

**According has a value as a diagnostic fool

**Octasional bouts of cole and diarrhea

**Octasional bouts of cole and diarrhea

**Doctasional bouts of cole and diarrhea

Total mensurates

Total mensurates Ulceration Intestinal obstruction 94. A 9 ments old child is brought to the emergency room with an irreducible firm swelling which descends into the less when the child is crystag. On examination, both testicles are palpable in the scrotum. What is the most apparature strategy? The patient who presents with heartburn
the patient with severe symptoms not responding adequately to drugs
the patient as whom surgery is planned for GERD
the patient who is on a research trial evaluating the results of antireflux surgery
the patient with Archasia Cardia intestinal metaplasia in the lower part of the esophagus Deficiency of vitamin B6

S 113. A 35 year old professional dancer presents with a well-defined, tense, smooth mass in the upper outer quadrant of the left breast. She states that the mass becomes larger just before onset of her periods. Aspiration yields a clear yellow c. This patient requires immediate surgery
d. A venous blood gas would be helpful in assessing the severity of illness in this patient
e. A serum calcium level of 6.5 mg/dL on the second hospital day is a bad prognostic sign
112. A 35 year old man is admitted with systolic blood pressure (BP) of 60 mm Hg and a heart rate (HR) of 150 bpm following a gunshot wound to the liver (Fig. 1-1). What is the effect on the kidneys?

a. They tolerate satisfactorily ischemia of 3-4 hours duration.
b. They undergo further ischemia if hypothermia is present. 1111. c. Surgery by the abdominal approach
 d. Conservative treatment (Digital reposition, dietary advice, treatment the diarrheal dysentery)
 e. Submucous injection of 5% phenol in almond oil
 109. Infections that require operative treatment include all of the following except:
 a. Abscess of the hip 110. Infections that require operative treatment include all of the following except 107. The most common site for colorectal malignancy is 106. fluid and the mass disappears. The most likely diagnosis is: d. Necrotizing fasciitis of the thigh
e. Vascular graft infection
A 60 year old alcoholic is admitted to the hospital with a diagnosis of acute pancreatitis. Upon admission, his white blood cell (WBC) count is 21,000. His lipase is 500, blood glucose is 180 mg/dL, lactate dehydrogenase (LDH) is 400 IU/L, and aspartate aminotransferase (AST) is 240 IU/dL. Which of the following is TRUE?
The patient is expected to have a mortality rate of less than 5%
b. The patient's lipase level is an important indication of prognosis A 25 year old male who has undergone hemorrholdectomy for Bleeding P/R is unable to pass urine 6 hours. A. He should be catheterized to prevent straining
b. He should be encouraged to pass urine in the bed pan
c. After removing the rectal pack he should be allowed to stand next to running Tap and voice
A fine red rubber tube should be used to empty the bladder
A firstula-in-ano is termed high or low reference to Partial rectal prolapse in infants and children should be treated by:

a. Excision of the prolapsed mucosa after applying Goodsall's ligature Galactocele Ty year old boy complains of pain the lower abdomen (mainly on the right side). Symptoms commenced 12 hours thich was maximal 1 cm below Mc Burney's point. In appendicitis, where does the pain frequently commence? Lipoma In the rectal region and moves to the right liac lossa in the umbilical region an then moves to the right liac lossa Carcinoma in a cyst They are prevented from further damage by vasopressor ibrocystic disease of the breast Fibroadenoma is a cyst They can become damaged, even though urine output exceeds 1500 mL/d. They are affected and cause an increased creatinine clearance. The anorectic ring Necrotizing fasciitis of the thigh Vascular graft infection Ascending colon None of above Auscess of the hip infected ascites The cuboidal epithelium of the anal canal Rectum ifected ascites
